# PROJECT TITLE

# Employee Performance Analysis using Excel

# A G E N D A

1. Problem Statement
2. Project Overview
3. End Users
4. Our Solution and Proposition
5. Dataset Description
6. Modelling Approach
7. Results and Discussion
8. Conclusion

# PROBLEM STATEMENT

Prformance analysis are made to a employees.  
Increment to check the performance track of  
the employees and it is useful for the  
employees personal as well as  
organizational growth.

So, the employees performance analysis helps to require all the problems and have a successful organisation.

## **PROJECT OVERVIEW**

Analysing the performance of the employees by considering the various factors like;

Gender,

Performance score and

Ratings.

Their involvement in work and various scores that analysis the performance of employees in the organization.

# WHO ARE THE END USERS?

Employees      Employer      Manager,

Gets benefits from the performance appraisal **OUR  
SOLUTION AND ITS VALUE PROPOSITION**

## Conditional Formatting – missing values

Filtering : remove missing data

Formulas : performance evaluation

Pivot : summary

Graph : data visualization

# **Dataset Description**

EMPLOYEES DATABASE KIGGLE

There are 26 features but we consider 9 features

Employees ID      Numerical data

Name                  Text

Performance        Level

Gender               Male Or Female

Employees rating   Numerical data

# THE "WOW" IN OUR SOLUTION

## Sample Queries:

1. Get all characters in a guild: `SELECT \* FROM Characters JOIN Members ON CharacterID = CharacterID WHERE GuildID = [GuildID]`
2. Get all raids a character has participated in: `SELECT \* FROM Raids JOIN RaidMembers ON RaidID = RaidID WHERE CharacterID = [CharacterID]`

This database design captures key WoW data and relationships, enabling you to store and query character, guild, and raid information.

# MODELLING

- 1.Data collection
  - 2.Feature collection
  - 3.Data cleaning
- .Performance level
- .Summary
- .Visualisation

## **Data collection**

In data collection we download the data from the edunet dashboard to work in the excel.

## **Feature collection**

So many features are used in the data like filtering, formatting, formulating. Pivot table, graph and used in data.

## **Data Cleaning**

Identified the missing values and remove those missing value from the data.

## **Performance level**

We evaluate the performance of the employees according to the data.

## **Summary**

Pivot table we are categorized the columns what we need and organization in the data.

## **Visualisation**

In graph method we have shown the performance data analysis and it is easy to identify the percentage.

## RESULTS

## PERFORMANCE ANALYSIS FOR EMPLOYEES

# RESULT:

# conclusion

While comparing the performance of employees, the number of employees are higher in number is in the average performance where excellence employees are less in percentage. So to overcome this we should motivate the employees by giving

there different tasks based on their skills to improve their performance in their work.
